Ajouter un suffixe UPN pour la synchronisation Azure AD

Etape 1 : rajouter un suffixe UPN

L'UPN principal de mon AD est ad.khroners.fr. On va rajouter khroners.fr.
Dans "Domaines et approbations Active Directory", :

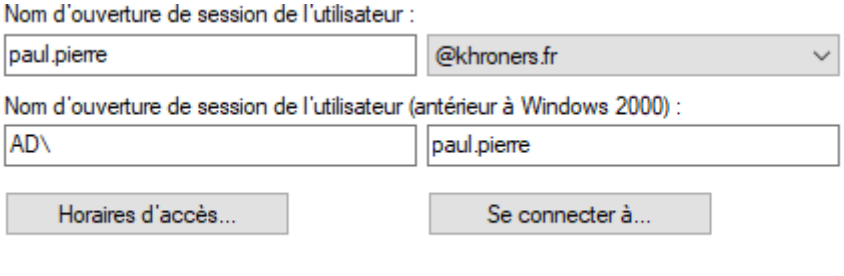

Etape 2 : modifier l'UPN de tous nos utilisateurs via PowerShell

```
$LocalUsers = Get-ADUser -Filter "UserPrincipalName -like '*ad.khroners.fr'" -Properties
userPrincipalName -ResultSetSize $null
$LocalUsers | foreach {$newUpn =
$_.UserPrincipalName.Replace("@ad.khroners.fr","@khroners.fr"); $_ | Set-ADUser -
UserPrincipalName $newUpn}
```

Pensez à remplacer khroners.fr par votre domaine.

On vérifie :
