

Mise en place de NGINX

Tout d'abord, on l'installe.

```
apt install nginx -y
```

On modifie le fichier de configuration pour y inclure :

```
nano /etc/nginx/nginx.conf
```

```
http {
    upstream backend {
        server 192.168.199.50 weight=5 max_fails=3 fail_timeout=10s;
        server 192.168.199.51 weight=1 max_fails=3 fail_timeout=10s;
    }

    server {
        listen 80;
        server_name web.home.khroners.fr;

        location / {
            proxy_set_header X-Real-IP $remote_addr;
            proxy_pass http://backend$request_uri;
            proxy_set_header X-Forwarded-For $remote_addr;
            proxy_set_header Host web.home.khroners.fr;
        }
    }
}
```

On redémarre le service.

```
systemctl restart nginx
```
