Configurer le stockage iSCSI (pour VMware)

Dans "Storage" et "Pools", on crée un pool : ui/storage/pools

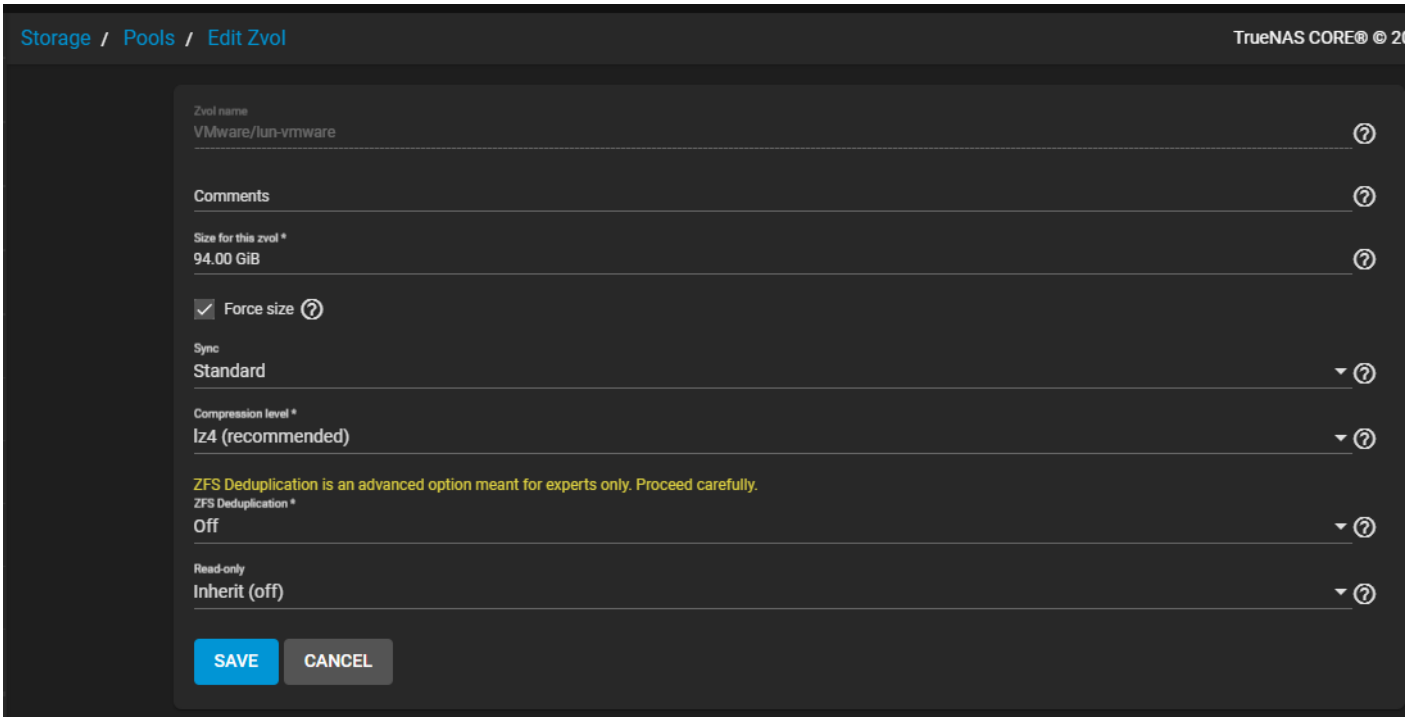

On coche nos deux disques et on clique sur la flèche orientée vers la droite.

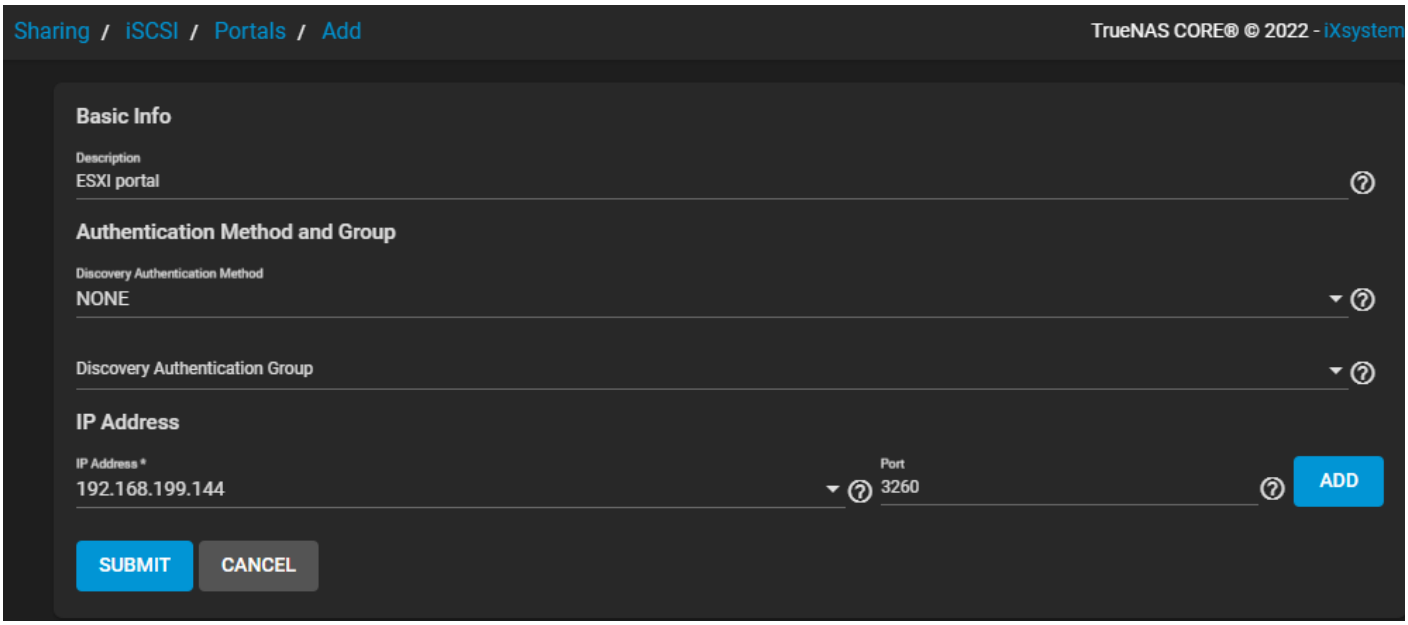

On clique sur "Create".

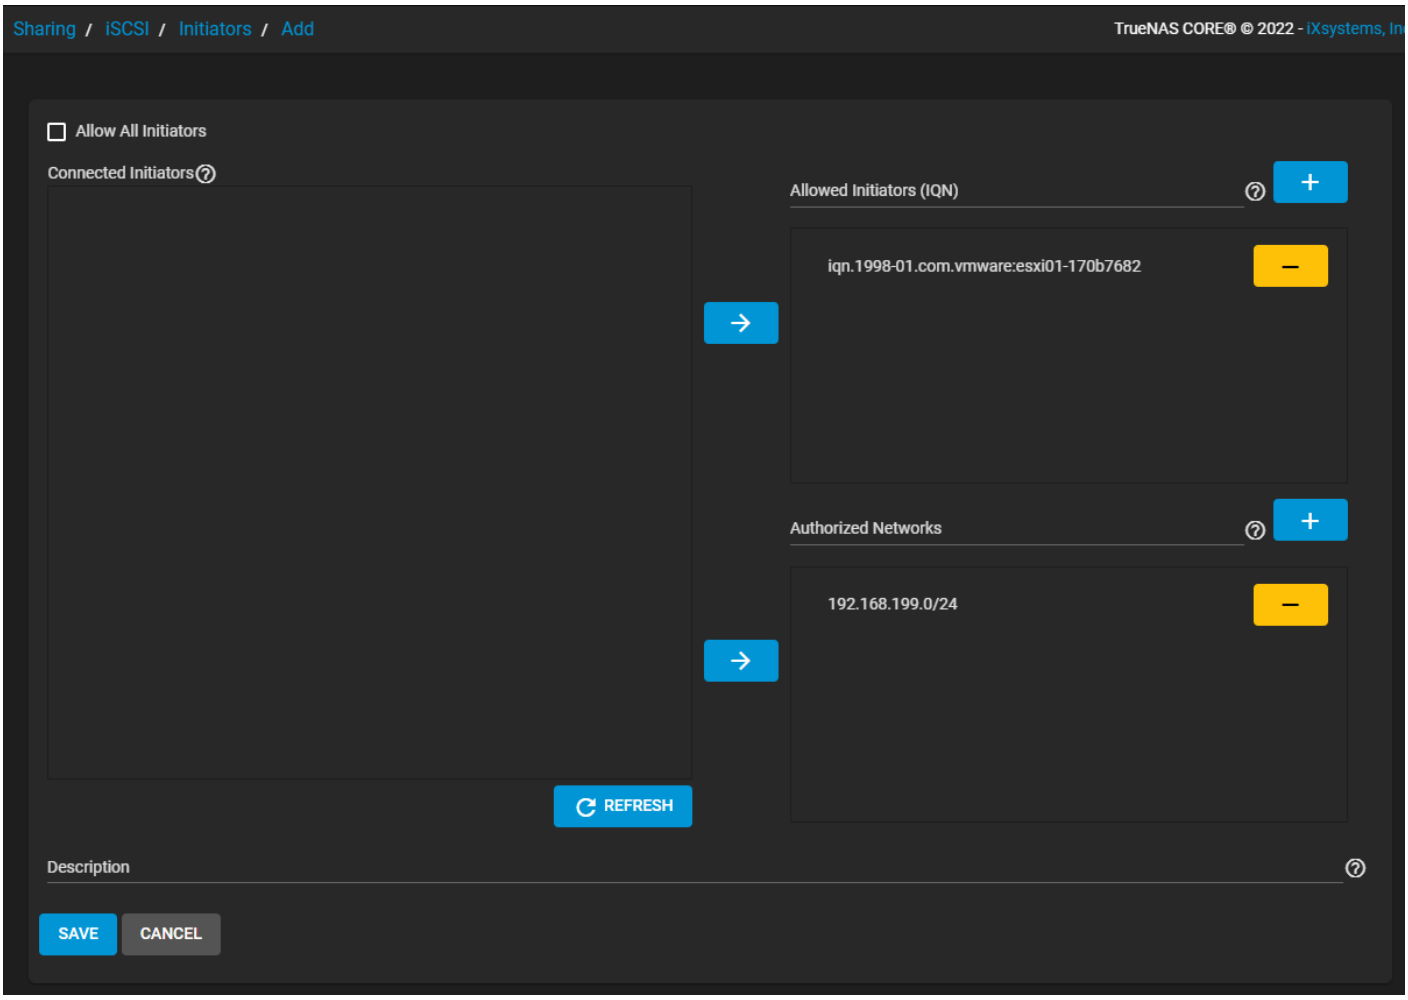

On y ajoute un Zvol.

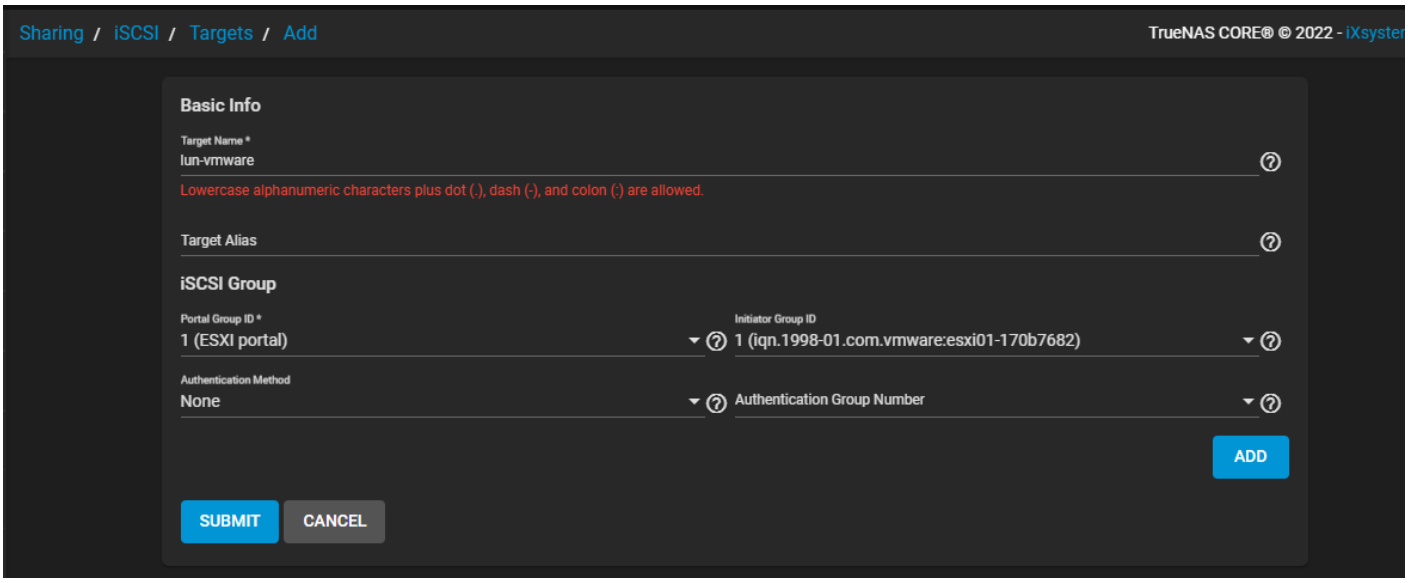

Dans "Sharing" et "Block Shares (iSCSI)", on crée un portail.

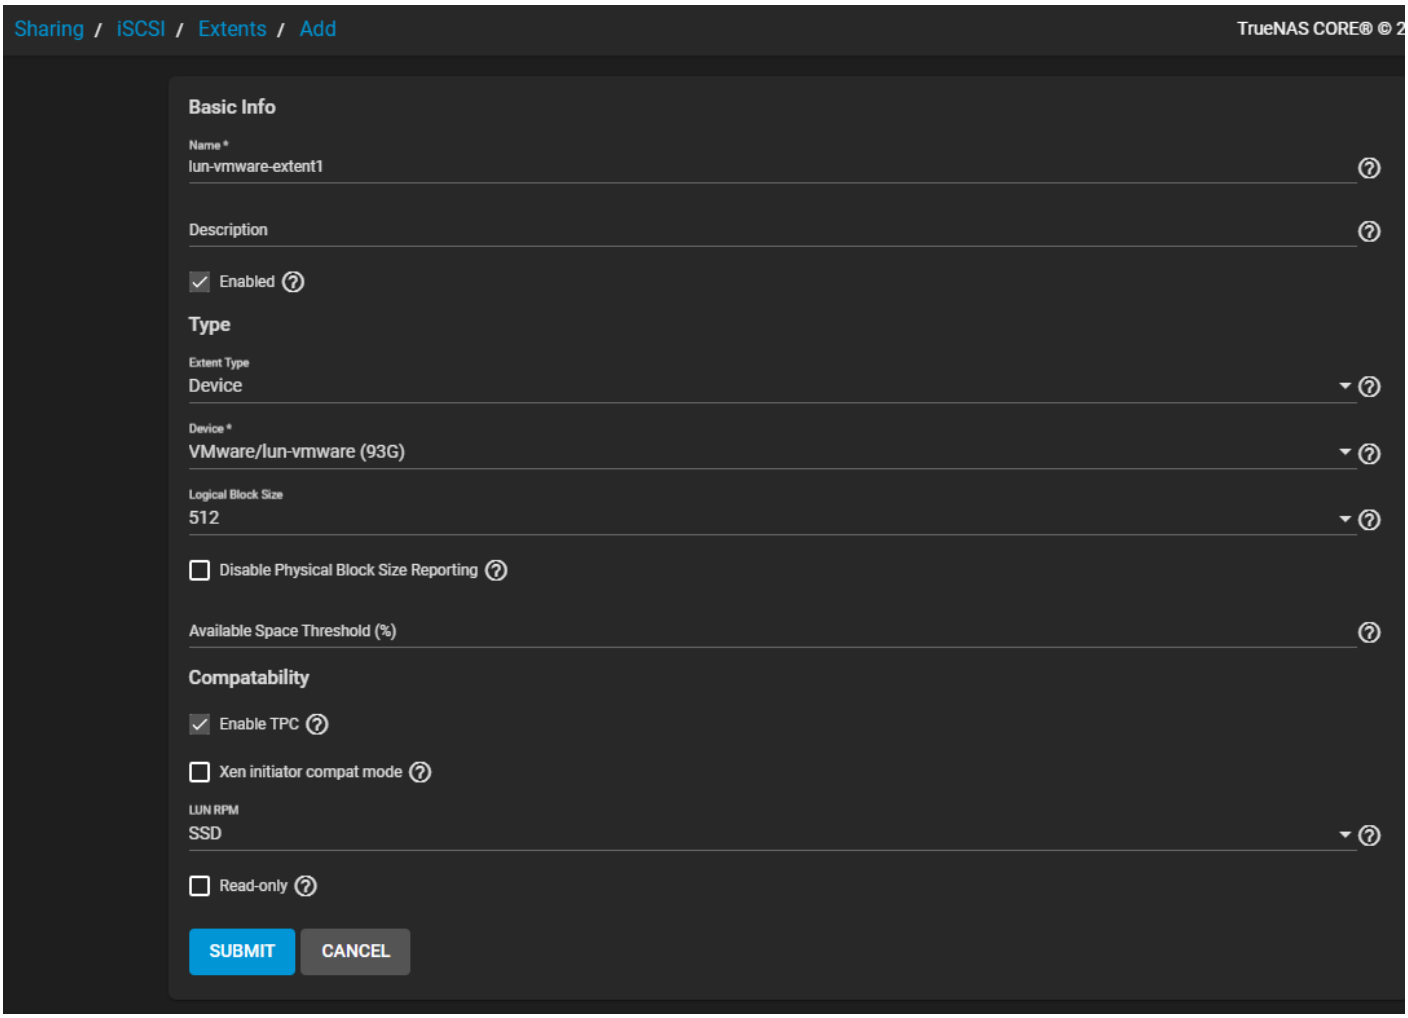

Dans "Initiators Group", on ajoute le nom IQN de l'ESXI et le réseau.

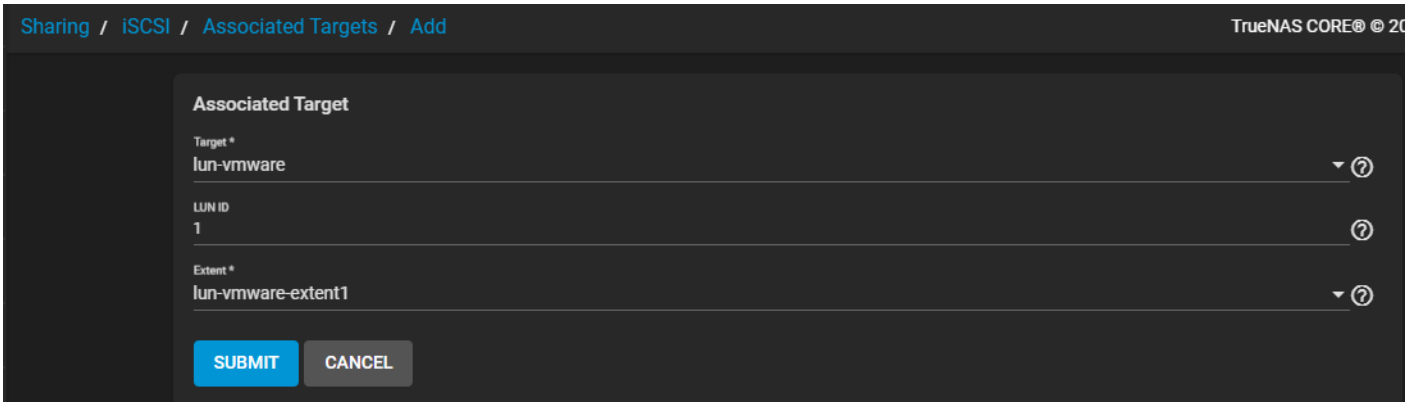

On ajoute ensuite une target dans "Targets".

On ajoute ensuite un extent.

On l'associe à notre cible.
