Ajout de l'ESXI dans Veeam

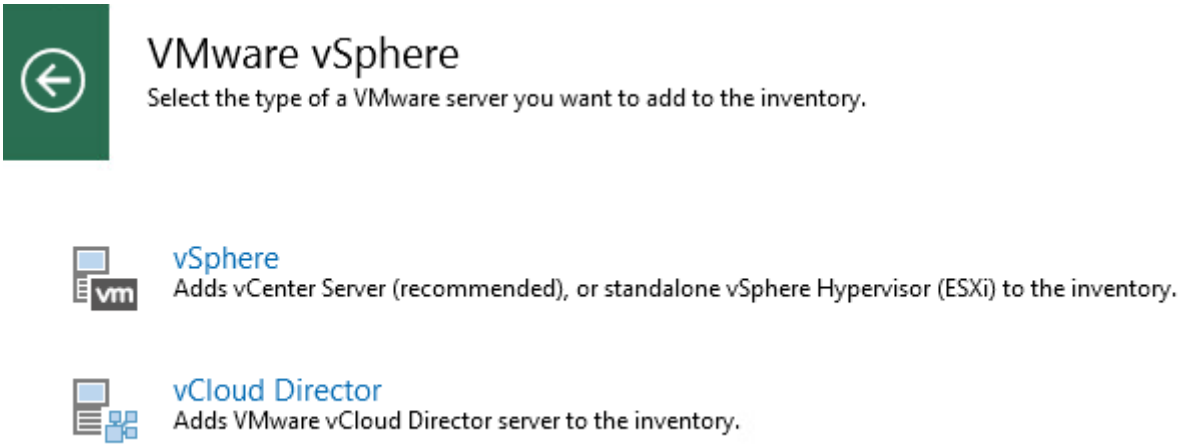

Dans "BACKUP INFRASTRUCTURE" puis "Managed Servers", on ajoute notre serveur ESXI.

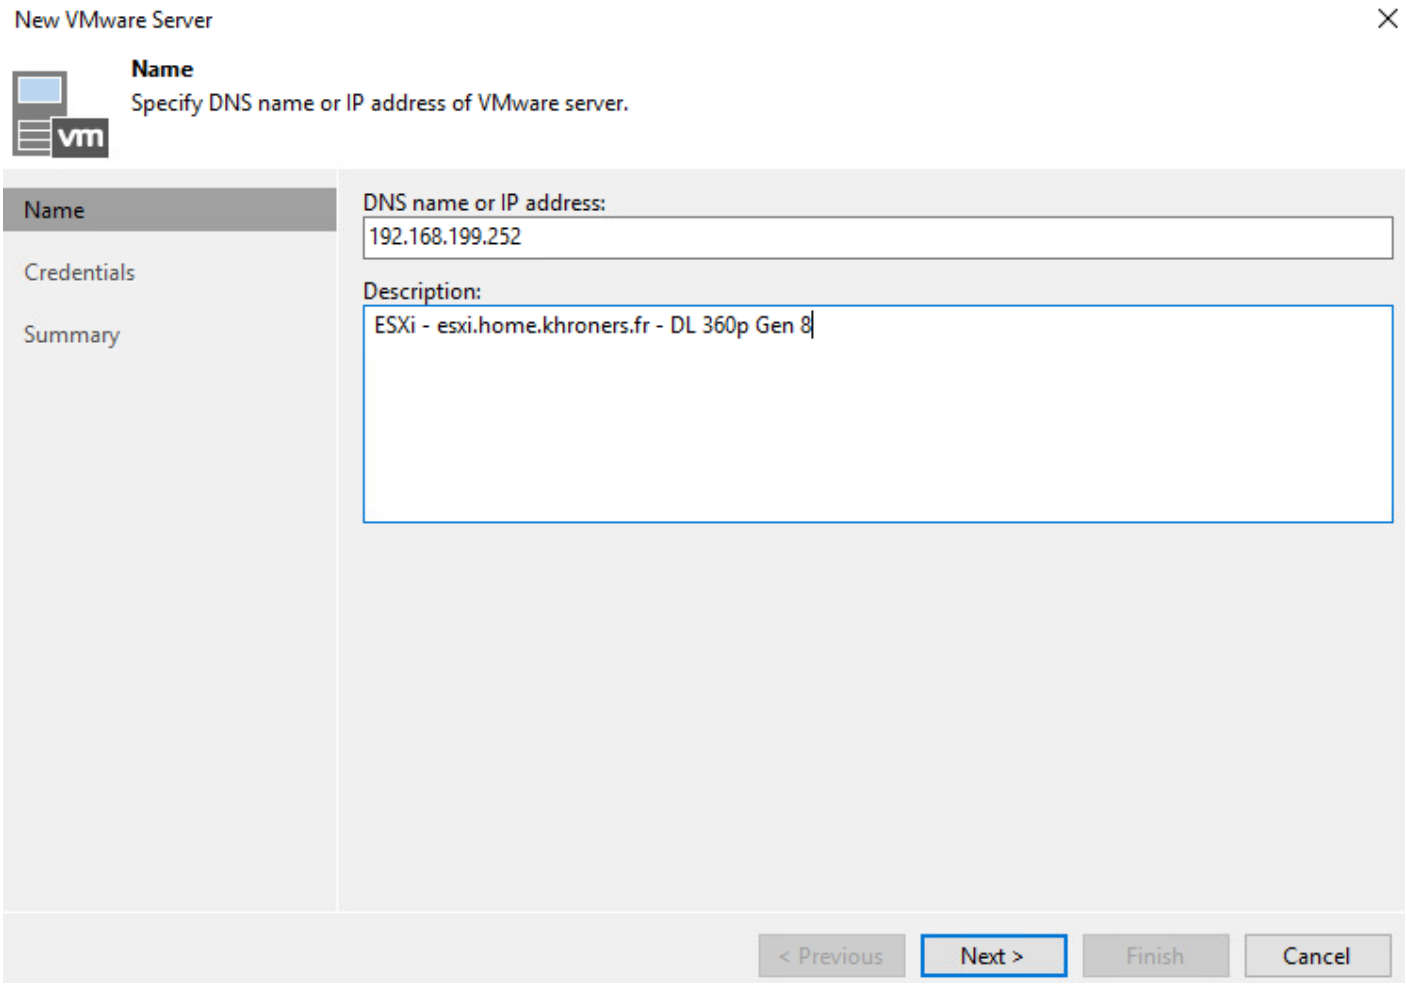

On choisit VMware vSphere.

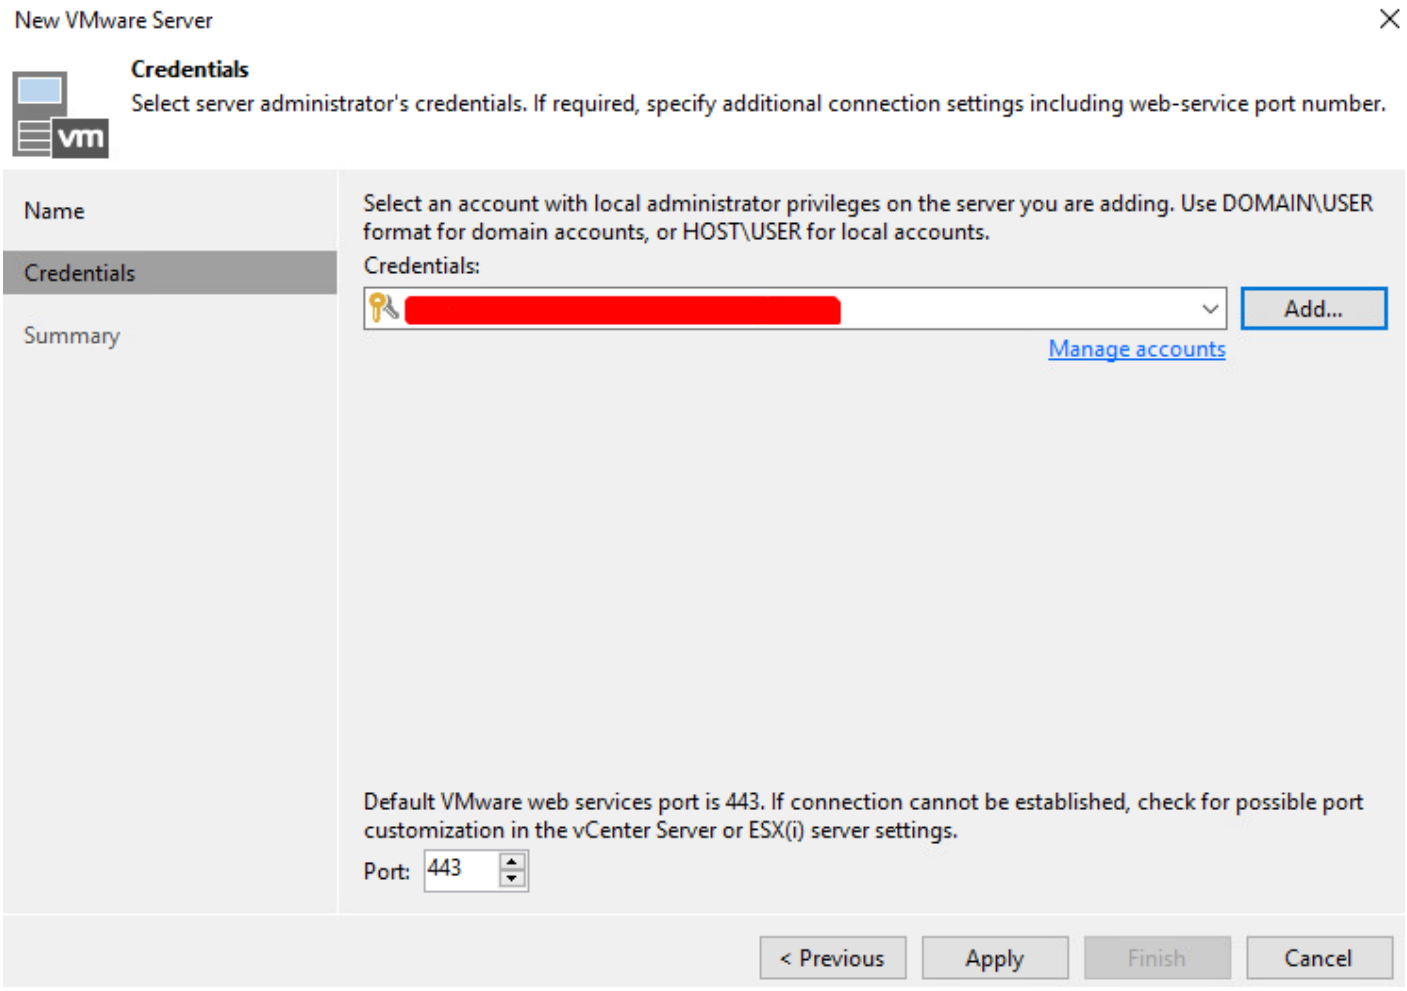

On choisit vSphere,

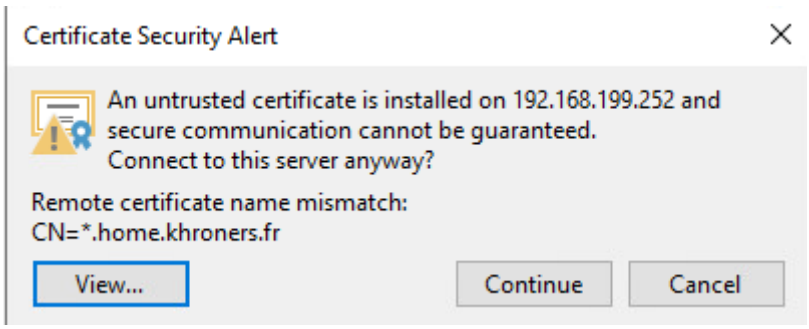

On entre le nom DNS ou l'adresse IP de notre ESXI.

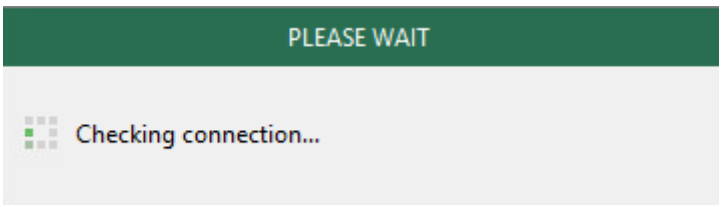

On ajoute les identifiants pour veeam. Le compte doit être administrateur sur l'ESXi

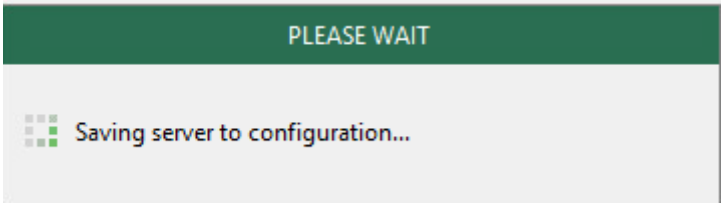

On clique sur continuer. (j'ai une alerte car j'ai rentré l'adresse IP et non le nom DNS de l'ESXI).

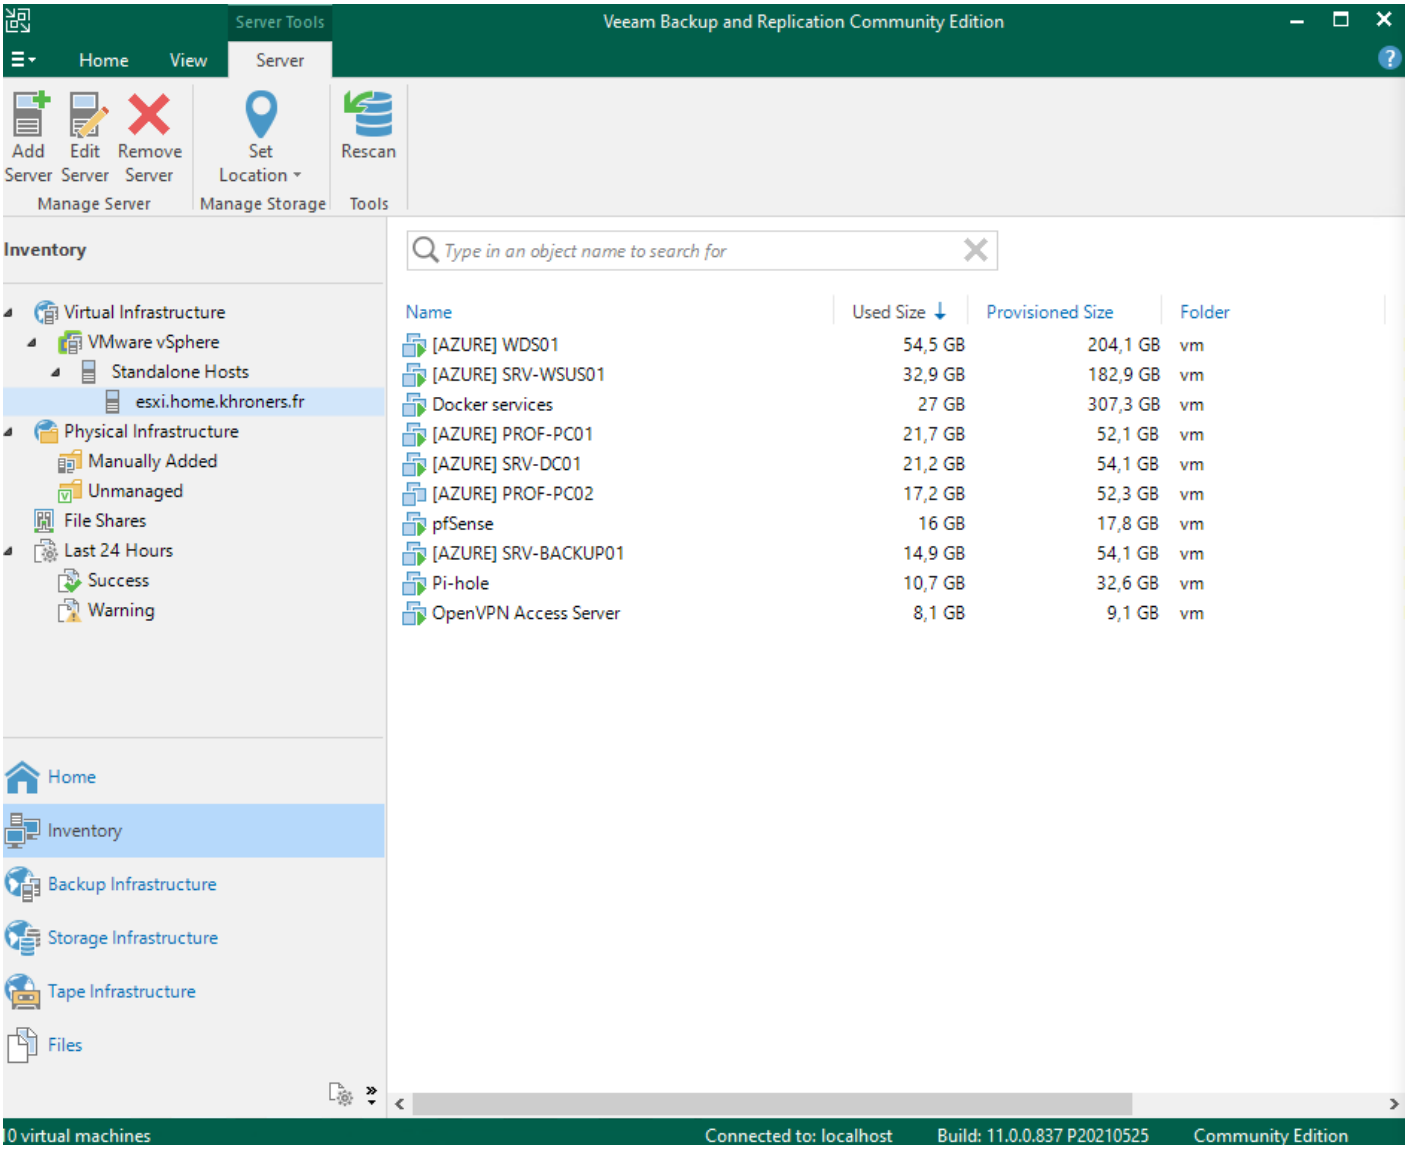

Veeam vérifie la connexion et sauvegarde la configuration.

Dans INVENTORY, on voit le serveur et les VMs.
