# Profils itinérants pour les utilisateurs et mappage du lecteur réseau personnel

On crée le dossier pour les profils itinérants.

On crée le partage comme les autres mais avec "Employés". (sans accent pour le nom de partage)

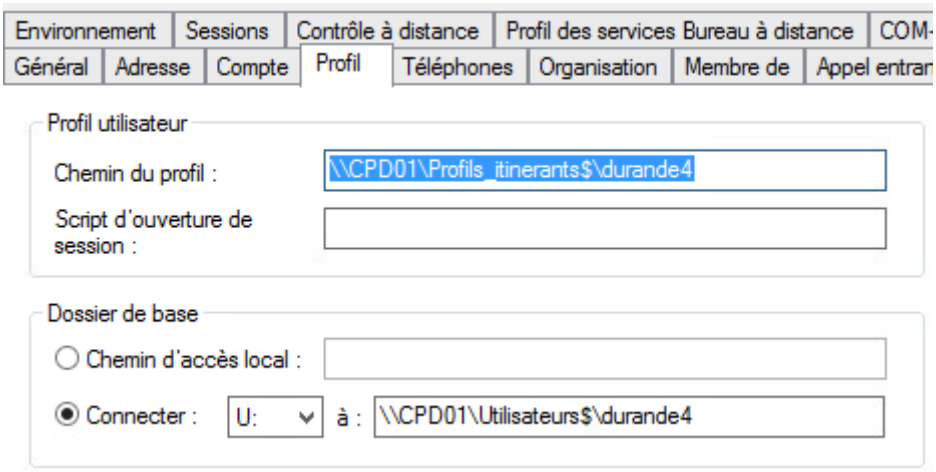

A l'aide un script Powershell, on modifie le profil des utilisateurs.

```
$OUpath = 'ou=Users,ou=Accounts,ou=Littoral1,dc=littoral1,dc=fr'
$Users = Get-ADUser -Filter 'enabled -eq $true' -SearchBase $OUpath -Properties ProfilePath |
```

```
Select-Object Name, SamAccountName, ProfilePath

Foreach($User in $Users){
    $ProfilePath = "\\CPD01\Profils_itinerants$\"
    $Profilepath = $ProfilePath + $User.samaccountname
    $HomeDirectory = "\\CPD01\Utilisateurs$\"
    $Homedirectory = $HomeDirectory + $User.samaccountname
    Set-ADUser $User.samaccountname -ProfilePath $ProfilePath -HomeDirectory $HomeDirectory -
HomeDrive U
}
```
