

Déployer des favoris Chrome via GPO

Après avoir installé les ADMX dans le magasin central (PolicyDefinitions du Sysvol), on active la stratégie "Activer la barre des favoris" et "Favoris gérés".

Les favoris utilisent le format .json, en voici un exemple.

```
[
  {
    "toplevel_name": "Favoris gérés"
  },
  {
    "url": "https://www.google.fr",
    "name": "Google"
  },
  {
    "url": "https://microsoft.com/",
    "name": "Microsoft"
  },
  {
    "url": "https://portal.office365.com",
    "name": "Portail Office 365"
  }
]
```

[JSON Formatter & Validator \(curiousconcept.com\)](https://curiousconcept.com/json-formatter-validator/)

On compacte le json.

JSON Data/URL

```
"toplevel_name": "Favoris gérés"
},
{
  "url": "https://www.google.fr",
  "name": "Google"
},
{
  "url": "https://microsoft.com//",
  "name": "Microsoft"
},
{
  "url": "https://portal.office365.com",
  "name": "Portail Office 365"
}
]
```

JSON Template

Compact

JSON Specification

RFC 8259

Fix JSON ☒ ?

Process

#1 July 14th 2022, 3:49:08 pm

VALID (RFC 8259)

Formatted JSON Data

```
[{"toplevel_name": "Favoris gérés"}, {"url": "https://www.google.fr", "name": "Google"}, {"url": "https://microsoft.com//", "name": "Microsoft"}, {"url": "https://portal.office365.com", "name": "Portail Office 365"}]
```

Dans "Favoris gérés", on colle le json compacté.
